RIDE WITH CONFIDENCE

KNOWING THAT YOUR SUIT HAS **TRUE LIFESAVING TECHNOLOGY**

**FLOATATION
ASSIST**

**RAPID
DRAINAGE**

**SELF
LEVELING**

**ESCAPE
ASSIST**

**MOBILITY
UNRESTRICTED**

**WET/DRY INSULATION
INSULATED WHEN WET**

The cold shock response is the first thing to occur after entering freezing water. An initial involuntary deep gasp is followed by massive hyperventilation that can be up to 1000% greater than normal breathing. If the rider's airway is below the waterline at this time, the rider risks drowning.

F.A.S.T.™ technology brings the rider to the surface quickly, keeping the head above water while the rider gets through the initial Cold Shock Response and can attempt to exit the water.

FXR

Cold incapacitation begins to set in during the first 10 minutes of immersion. Loss of use of fingers/arms/legs leads to swim failure, and eventually drowning, if the rider is not able to get out of the water quickly and is not wearing a floatation suit.

F.A.S.T™ Insulation retains buoyancy properties for up to 2hrs, and is strategically positioned within the suit to allow unrestricted movement, both on the sled, and getting out of the water. FXR boots are a key component to mobility, and exiting the water, due to the use of highly buoyant materials.

Cold incapacitation begins to set in during the first 10 minutes of immersion. Loss of use of fingers/arms/legs leads to swim failure, and eventually drowning, if the rider is not able to get out of the water quickly and is not wearing a floatation suit.

F.A.S.T™ Insulation retains buoyancy properties for up to 2hrs, and is strategically positioned within the suit to allow unrestricted movement, both on the sled, and getting out of the water. FXR boots are a key component to mobility, and exiting the water, due to the use of highly buoyant materials.

AVAILABLE IN SELECT FXR MEN'S, WOMEN'S OUTERWEAR & ALL FXR CHILD/YOUTH OUTERWEAR

A.C.M.T.TM
ADVANCED CLIMATE MANAGEMENT TECHNOLOGY

HYDRX PROTM

HYDRX PROTM OUTER LAYER WATERPROOFING

- Durable Outer Shell with HydrX ProTM Membrane repels 99% of external moisture from entering the jacket.

HYDRX PROTM INNER LAYER WATERPROOFING

- Seam-Sealed Inner Lining with HydrX ProTM Membrane acts as a 2nd Waterproof/Breathable barrier, stopping external moisture, and creating a semi-sealed air space between the layers of the garment.

INNER MICRO-CLIMATE

- The air space between the ACMTTM Lining and the outer shell creates an Inner Micro-Climate, allowing the outer shell and inner lining to function at different temperatures.

BREATHABILITY

- The warmer temperature of the inner ACMTTM Lining allows the inner HydrX ProTM Membrane to maintain breathability.

ANTI-CONDENSATION

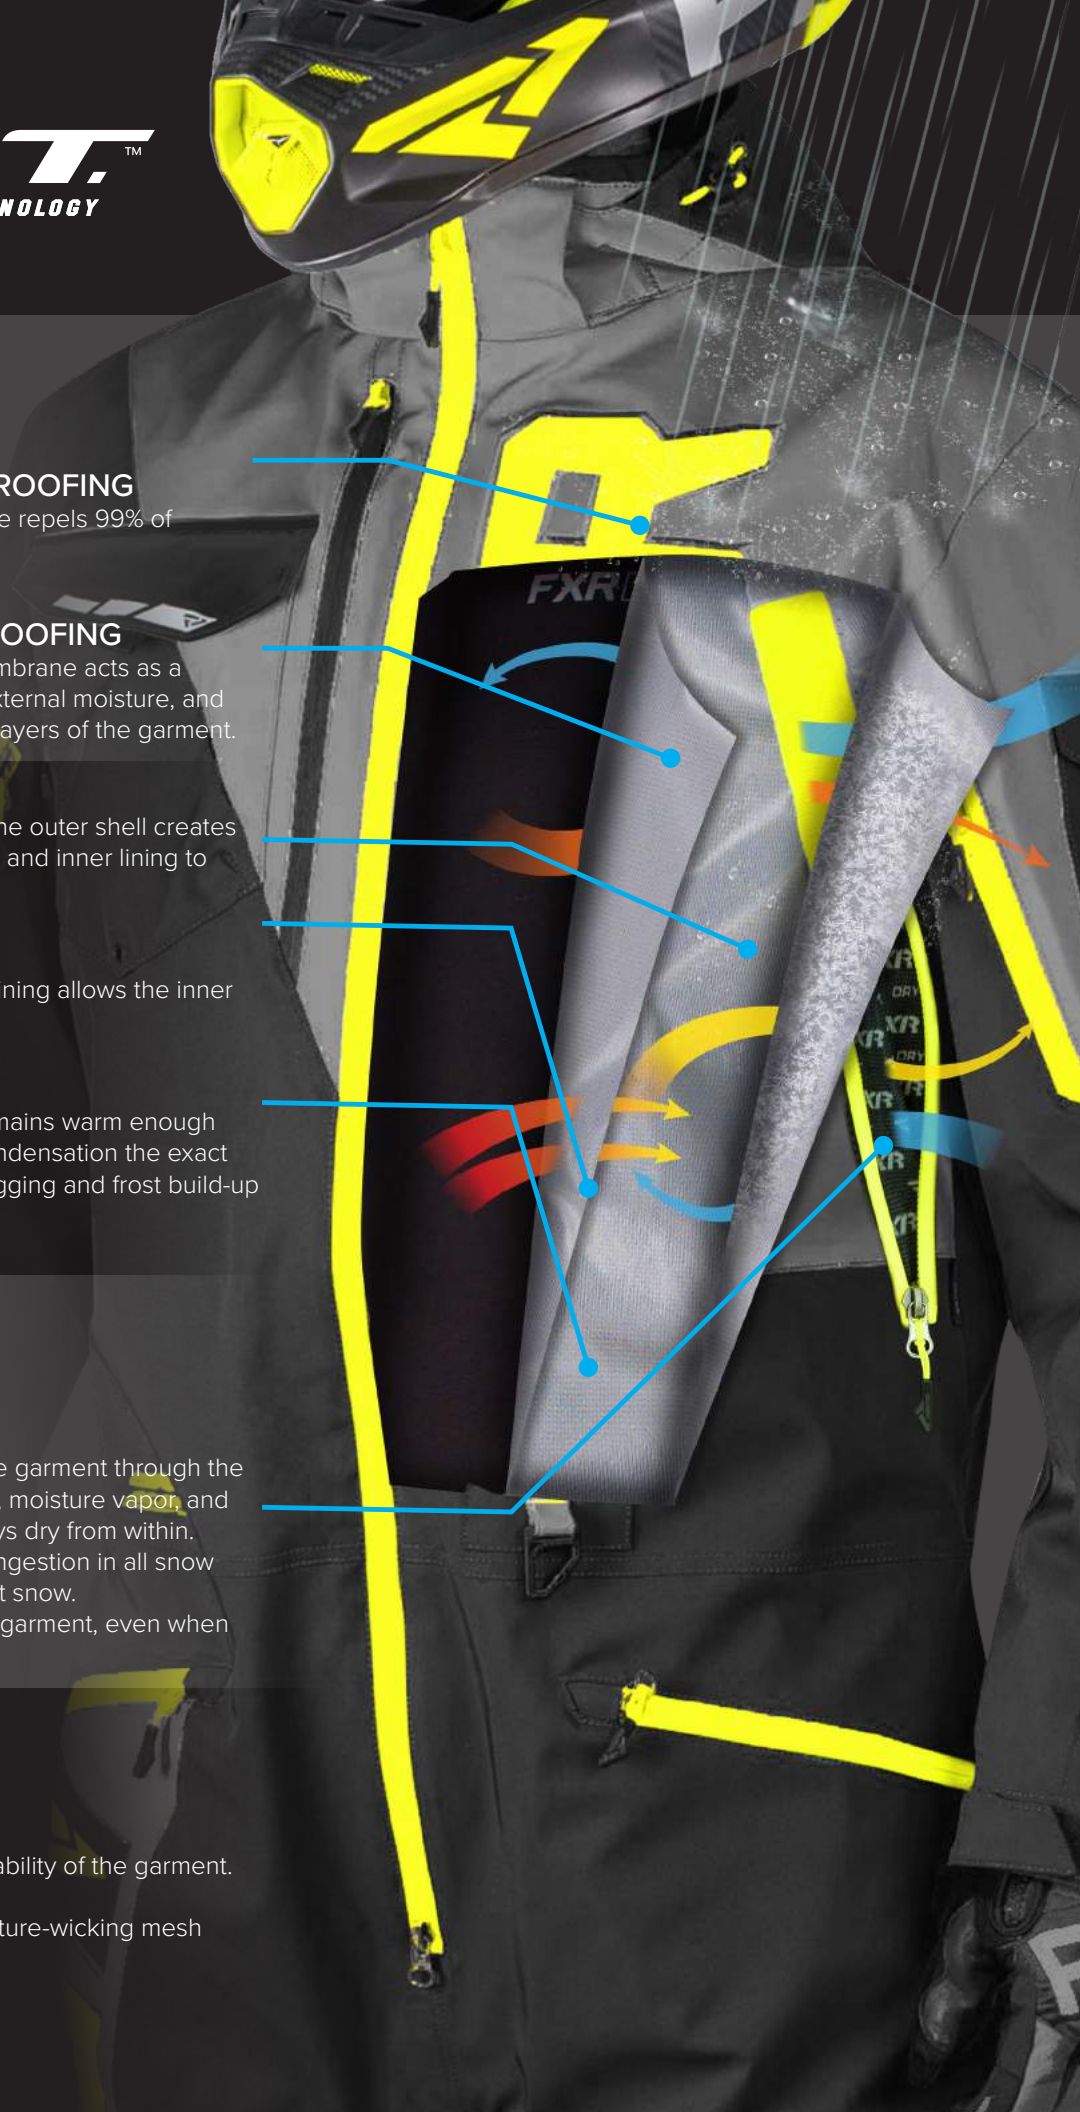

- The temperature of the inner ACMTTM Lining remains warm enough to stay above the Dewpoint, reducing inner condensation the exact same way that a dual goggle lens reduces fogging and frost build-up on the inner lens.

DryVentTM system

- Warm, moist air can now be exhausted from the garment through the Dry Vent System, effectively moving inner heat, moisture vapor, and sweat away from the body so that the rider stays dry from within.
- Seam-sealed Dry Vent Mesh eliminates snow ingestion in all snow conditions, including bottomless powder or wet snow.
- Allows air exchange between the layers of the garment, even when zips are closed.

ThermalDryTM ACTIVE LINER

- Key to the overall comfort, warmth, and breathability of the garment.
- Remains flexible at any temperature.
- Allows for maximum breathability through moisture-wicking mesh layers & Thermal Flex Insulation.

Dri-LINK™

Provides protection from the elements like a monosuit with the mobile fit of a two piece suit.

FXR's exclusive Dri-Link™ technology allows a 2pc suit to be connected at the waist with a 360° zipper system, giving it similar protective properties to a monosuit, from both cold temperatures and snow ingestion.

The Dri-Link™ acts as an expansion gusset. Allowing short or tall riders to adjust the waist height and inseam to their preference. This increases mobility and allows the rider to move their legs freely.

Dri-Link™ Systems Sold Together as Monosuit

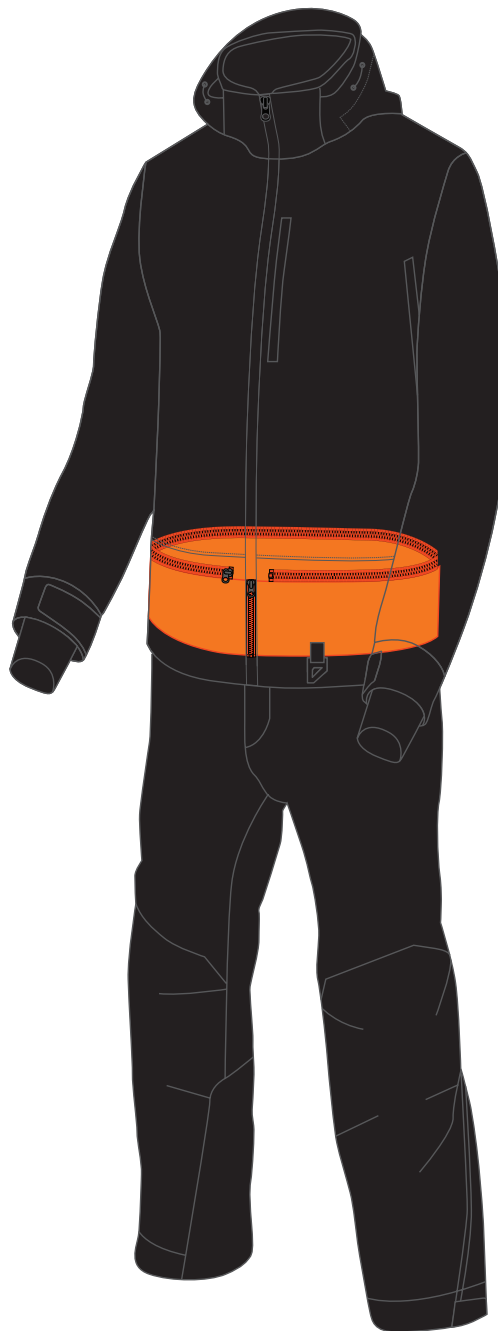

Step 1: Untuck Dri-Link™ from pant (stow away when not in use)

Step 2: Connect zipper on Dri-Link™ to zipper rail on jacket and pull zipper around, connecting the jacket to the pant.

Step 3: Connect front zipper, fully sealing the Dri-Link™.

Dri-Link™ Systems Sold Separately

The Dri-Link is a size-specific component, if purchasing a mis-matched suit, the Dri-Link size should match the Pant size.

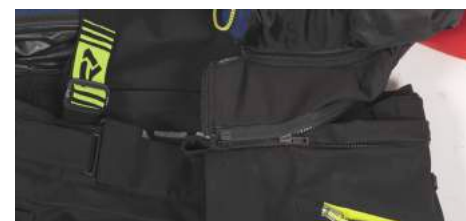

Step 1: Unzip Windskirt from jacket (Stow away when not in use)

Step 2: With the Dri-Link logo facing outward and upward, align the longest zipper on the Dri-Link to the left side of the jacket, connect the Dri-Link to the jacket

Step 3: Raise the flap on the waist of the pant, align the zipper to the left side of the pant, connect the zipper around the waist, being careful not to catch material in the zipper teeth

Step 4: Connect front zipper, fully sealing the Dri-Link

OMNI-STRETCH™

Omni Stretch™ shell material provides maximum stretch and mobility, while allowing the shell material to take impacts from trees and rocks, with minimal chance of snagging or tearing. Omni Stretch™ is extremely durable and provides the greatest amount of stretch in a rugged shell material in the industry. Available in select premium FXR Jackets, Pants and Monosuits.

**IMPACT
RESISTANT
MATERIAL**

**SNAG & TEAR
FREE MATERIAL
REMAINS PLIABLE
IN EXTREME COLD**

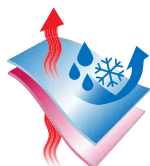

**MOBILITY
UNRESTRICTED**

ACMT™ Advanced Climate Management Technology is FXR's proprietary collection of dry mesh venting, dual-layered HydrX Pro™ laminates and seam sealed linings, creating a Dual Layer Moisture Shield. This elite combination dramatically improves an outerwear garment's ability to maintain waterproofness, breathability, reduce condensation, and manage the inner micro-climate zone between the body and the garment by creating a dual moisture shield against the damp and cold. FXR's ACMT™ HydrX Pro™ combination is guaranteed to keep you dry, warm and comfortable during high intensity rides.

FXR's Thermal Flex™ insulation is a powerful blend of polyester fiber fill that provides exceptional warmth and flexibility at any temperature. Unlike other fiber fills, which often become stiff in cold weather, our Thermal Flex™ insulation provides superior comfort, mobility and warmth season after season, wet or dry. Our trade-marked insulation is used in both fixed and removable liner systems, in both jackets and pants meaning all of our products come with unbeatable heat retention abilities.

The new Dry Vent™ System is a high performance venting system that maximizes ventilation in radial side body vents and the chest of FXR jackets and the inner and outer thigh of FXR pants. Seam sealed venting mesh eliminates snow ingestion in all snow conditions, including bottomless powder or wet snow. It uses the cold air entering the vents to exhaust the warm air built within the inner microclimate between your jacket/ pant and base layers. FXR's trademarked Dry Vent™ System is 99% more effective at controlling your core temperature and keeping you dry than any waterproof/ breathable system on the planet.

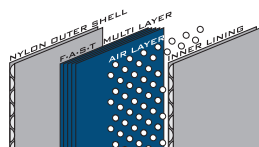

Key to the overall comfort, warmth, and breathability of the garment.
Remains flexible at any temperature.
Allows for maximum breathability through moisture-wicking mesh layers & Thermal Flex Insulation.

EXKIN® PLATINUM® is the ultimate technology for increasing warmth. Exkin® Platinum® thermal technology maintains warmth, prevents heat loss and retains insulating properties even when wet. Lightweight construction does not compromise mobility by adding bulk. Added to the back and chest of FXR products, it adds warmth to places that lose the most from being exposed to the wind.

F.A.S.T. insulation is made from an expanded, low-density polyethylene foam membrane that offers buoyancy assistance for up to two hours. The floatation membrane construction has excellent insulation properties, even when wet, which is integral should you be submerged. The F.A.S.T. membrane is also moisture resistant and lightweight, which allows the user to retain excellent warmth and mobility.
IMPORTANT – FXR jacket and pants with F.A.S.T. must be worn together as a suit to achieve buoyancy properties. Additionally, F.A.S.T. items will be rendered ineffective in adverse conditions such as strong water currents. F.A.S.T. equipped products provide exceptional mobility, warmth, style, and attention to detail while offering buoyancy properties, but are NOT COAST GUARD APPROVED.

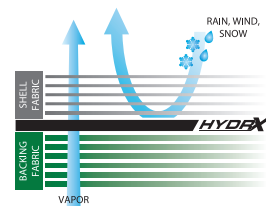

OMNI-STRETCH™

Omni Stretch™ shell material provides maximum stretch and mobility, while allowing the shell material to take impacts from trees and rocks, with minimal chance of snagging or tearing. Omni Stretch™ is extremely durable and provides the greatest amount of stretch in a rugged shell material in the industry. Available in select premium FXR Jackets, Pants and Monosuits.

HydrX™ is FXR's exclusive Single Layer Moisture Shield that is applied to the outer shell of FXR products. HydrX™ is applied as a single layer laminate in mid-level FXR garments and a single layer coating in entry level FXR garments

Dri-LINK™

Provides protection from the elements like a monosuit with the higher inseam and mobile fit of a two piece. Extremely versatile for both short and tall riders alike and allows increased mobility and proper fit. When both pieces are attached, the Dri Link™ allows increased warmth for colder days while removing the Dri Link™ on warmer days provides maximum cooling and air exchange.

COLD INSULATED RATING ICONS

MILD WEATHER / AGGRESSIVE RIDING GEAR

A value of 1 has no thermal insulation and is suitable for mild climates or situations where intensive perspiration occurs.

COLD WEATHER / LOW ACTIVITY RIDING GEAR

Values between 7-10 have extremely high thermal properties and are able to withstand extreme temperatures, well below -40°C/F and will keep you warm during sedentary outdoor activities.

SHELL & FIXED LINING COMBINED INSULATION RATING

If the item is a 2-in-1 or 3-in-1 (indicating it has a removable liner), both the "SHELL" and "COMBO" (combined) value of the shell and liner will be displayed.

BOOT STIFFNESS SCALE

FXR rates its boots for warmth and stiffness to allow riders to select the boot that most suits their riding style and preferences. A stiffness rating of 10 indicated maximum rigidity and support for aggressive riding, while a stiffness rating of 4-5 indicated more flexibility for comfort and ease of walking/casual use.
